```
The present sequence represents novel human caspase recruitment domain, CARD-10. The polynucleotide encoding this sequence was isolated from a human skin cDNA library. Also described are novel human sequences for CARD-9 and CARD-11 (AAV01205, AAV01207) and rat CARD-9 (AAV01204). CARD-9, CARD-10 and CARD-11 interact with Bcl-10 which is thought to activate nuclear factor (NF)-kappaB and apoptosis. The sequences of the invention can be used for treating a disorder associated with abnormal levels of apoptosis by modulating the expression or activity of CARD-9, CARD-10, or CARD-11. They can be used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel caspase recruitment domain (CARD) proteins, CARD-9, CARD-10, CARD-11, useful as targets for therapy, as immunogens, and in screening and detection assays -

hyperproliferative disorders (e.g. cancer), autoimmune disorders (e.g. systemic lupus erythematosus), neurological disorders (e.g. Alzheimer's disease), inflammatory disorders (e.g. Crohn's disease), and viral infection (e.g. HY). The CARD polypeptide, polynucleotide and an antibody which selectively binds to CARD can be used in screening
                                                                          and detection assays (e.g. chromosomal mapping, tissue typing), predictive medicine (prognostic assays, monitoring clinical trials, and therapy (treatment and prophylaxis). The CARD polypeptide may be used to screen for drugs that bind to and/or modulate it. CARD sequences are potential targets for regulating inflammation, cancer, NF-kappaB signalling, stress-related response and apoptosis in human disease. A host cell containing a polynucleotide encoding CARD can be used to create transgenic animals.
                                                                                                                                                                                                                                                                                                                                                  846 RPVVLLPECLAPRLIRNLLDLPSSRLDFQVCPAESLSGEELCPSSAPGAPKAQPATPGLG 905

The gene was isolated from a lambda-gtl0 CDNA library of mouse 702/3 B lymphoma cells, using the corresp, human gene (AAT17148) as a probe. The isolated gene fragment (800 bp) was cloned into pUC118. These proteins

       The present sequence is a human protein belonging to the dlg family (P-dlg). P-dlg is recognised by an antibody binding to the epitope: KEQRDETYLRDKYTORHSKE. The dlg family of proteins is involved in regulation of embryogenesis and in tumnour suppression. P-dlg, and its associated polynucleotides and antibodies are useful in investigating mechanisms of tumour suppression and in the design and screening of potential anticancer agents.

were fused to a hexa-His/thrombin cleavage site peptide sequence for ease of purification. The human and mouse guanylate kinase genes can be used to construct dual expression vectors confg. the human or mouse sequences and novel Herpes simplex virus (HSV) type-1 thymidine kinase mutants (AATO5187-91) which contain mutations in the region encoding residues 165-175. Vectors confg. the mutant and normal kinase sequences can be used to inhibit a pathogenic agent in a warm blooded animal e.g. viruses, bacteria or parasites, or a tumour cell or autoreactive immune

The invention relates to the generation of novel HSV-1 thymidine kinase (TK) or GK genes with a mutation upstream, within or downstream from a DRH nucleoside binding site. The TK enzymes can be used for inhibiting pathogenic agents, e.g. tumours, hyperkeratosis, psoriasis, prostate hypertrophy, hyperthyroidism, endocrinopathies, autoimmune diseases, allergies, restenosis, viral diseases such as AIDS, hepatitis,
The HCGPF exhibits immune control and haematopietic control functions over a wide range and may be used in the fields of immunodeficient diseases, autoimmune diseases, infectious diseases, hepatitis, nephritis, cancers and bone marrow transplantation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the mouse guanylate kinase (GK) protein. The invention relates to the generation of novel HSV-1 thymidine kinase (TK) or GK genes with a mutation upstream, within or downstream from a DRH nucleoside binding site. The TK enzymes can be used for inhibiting pathogenic agents, e.g. tumours, hyperkatosis, psoriasis, prostate allorgies, restenosis, viral diseases such as AIDS, hepatitis, intracellular parasitic diseases or bacterial infection.

Also claimed is a vector DNA capable of replication in prokaryotes and eukaryotes, the transformed prokaryotes and eukaryotes and a polypeptide having HCGPF activity. The HCGPF potentiates the growth of haematopoietic cells. It exhibits immune control and haematopoietic control functions.
                                                                                                                                                                                                                                                   Human haematopoietic cell growth potentiating factor; immune control; haematopoietic control functions; immunodeficient diseases;

The gene was isolated from a proliferating B lymphocyte cDNA library with primers AAT/150-1. The resulting fragment (600 bp) was cloned into pUC118.

The human gene was used to isolate the gene encoding the mouse guanylate kinase gene (AAT/149). These proteins were fused to as the hear-His/thrombin cleavage site peptide sequence for eas of purification. The human and mouse guanylate kinase gene can be used to construct dual expression vectors contg. the human or mouse sequences and novel Herspes simplex virus (HSV) type-1 thymidine kinase mutants (AAT/05187-91) which contain mutations in the region encoding residues 165-175. Vectors contg. the mutant and normal kinase sequences can be

DHAM-kinases used in the invention include guanylate kinase I (GUKI), serin-threonin-kinase PAK2 and serin-threonin-kinase PRK2. The method of the invention is useful for identifying substances that influence inflammatory conditions of chronic inflammatory airway diseases (e.g. chronic bronchitis or chronic obstructive pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining activators or inhibitors of 'deregulated in hyperactive macrophage' (DHAM)-kinase for treating chronic inflammatory airway diseases, by measuring DHAM-kinase function after it is contacted with

Patent No. US20020081636A1
GENERAL INFORMATION:
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED
TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF
FILE REFERENCE: 07334-142001
CURRENT APPLICATION NUMBER: US/09/767,215
CURRENT FILING DATE: 2001-01-22
PRIOR PILING DATE: 2000-02-09
PRIOR FILING DATE: 2000-02-09
NUMBER OF SEQ ID NOS: 10
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels

Patent No. US20020160438A1

GENERAL INFORMATION:

APPLICANT: Boehringer Ingelheim Pharma KG

TITLE OF INVENTION: Method for identifying compounds which positively

TITLE OF INVENTION: influence inflammatory conditions

FILE REFERENCE: 1/1177

CURRENT APPLICATION NUMBER: US/10/029,905

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

tamA protein - fruit fly (Drosophila melanogaster)

C;Species: Drosophila melanogaster

C;Date: 13-Aug-1999 #sequence_revision 13-Aug-1999 #text_change 17-Nov-2000

C;Accession: T13703

R;Takahisa, M.; Togashi, S.; Suzuki, T.; Kobayashi, M.; Murayama, A.; Kondo, K.; Miya

Genes Dev. 10, 1783-1795, 1996

A;Title: The Drosophila tamou gene, a component of the activating pathway of extramac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A.Molecule type: protein
A.Residues: 1-197 <282>
C.Superfamily: quanylate kinase; quanylate kinase homology
C.Keywords: acetylated amino end; ATP; magnesium; monomer; nucleotide binding; P-loop
F;4-188/Domain: guanylate kinase homology <GKI>
F;10-17/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                                                A;Molecule type: protein

Conserved hypothetical protein AF1032 - Archaeoglobus fulgidus
C;Species: Archaeoglobus fulgidus
C;Accession: H69378
R;Klenk, H.P.; Clayton, R.A.; Tomb, J.F.; White, O.; Nelson, K.E.; Ketchum, K.A.; Dod
T; Fleischmann, R.D.; Quackenbush, J.; Lee, N.H.; Sutton, G.G.; Gill, S.; Kirkness, E
Glodek, A.; Zhou, L.; Overbeek, R.; Gocayne, J.D.; Weidman, J.F.; McDonald, L.
Nature 390, 364-370, 1997
A;Authors: Utterback, T.; Cotton, M.D.; Spriggs, T.; Artiach, P.; Kaine, B.P.; Sykes,
Smith, H.O.; Woese, C.R.; Venter, J.C. C
A;Title: The complete genome sequence of the hyperthermophilic, sulfate-reducing arch
A;Reference number: A69250; MUID:98049343; PMID:9389475
A;Status: preliminary; nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Residues: 1-886 <KLE>
A;Cross-references: GB:AE001032; GB:AE000782; NID:92689355; PIDN:AAB90211.1; PID:9264
C;Superfamily: Archaeoglobus fulgidus conserved hypothetical protein AF1032
Nature 389, 512-516, 1997
A;Title: Circadian oscillation of a mammalian homologue of the Drosophila period gene
A;Reference number: 214056; MUID:97472418; PMID:9333243

N.Alternate names: brain specific PSD-95 protein; discs-large tumor suppressor protein P
C.Species: Rattus norvegicus (Norway rat)
C.Spate: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 16-Jul-1999
C.Accession: JH0800; S26407

                                                                                                                                                                                                                                                                                                                                                                -:- SUBCELLULAR LOCATION: Cytoplasmic.
-:- TISSUE SPECIFICITY: Detected in adult peripheral blood leukocytes, trysue Specificity: Detected in adult peripheral blood leukocytes, trymus, spleen and liver. Also found in promyelocytic leukemia HL-60 cells, chronic myelogenous leukemia K562 cells, Burkitt's Iymphoma Raji cells and colorectal adenocarcinoma SW480 cells. Not detected in HeLa S3, Molt-4, A549 and G431 cells. Not detected in HeLa S3, Molt-4, A549 and G431 cells.
-:- SIMILARITY: CONTAINS 1 PDZ/DHR DOMAIN.
-:- SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.
-:- CAUTION: Supposed to contain a SH3 domain which is not detected by PROSITE, Ffam or SMART.

15-JUN-2002 (Rel. 41, Last annotation update)
Caspase recruitment domain protein 10 (Bcl10-interacting MAGUK protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                942 IRGLIGRPGWRDSELLRQCRGSEQWLWGLPCSWVQVPAHAWGHAEELAKVVRGRILQEQA 1001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  interaction. They both participate in a complex with MALT1, where MALT1 binds to Bc110.
--- TISSUE SPECIFICITY: Highly expressed in kidney, heart followed by brain, lung, liver, skeletal muscle and testis.
--- SIMILARITY: CONTAINS I CARD DOMAIN.
--- CAUTION: Supposed to contain a SH3, a PDZ and a guanylate kinase-like domain. But none of these 3 domains are detected by PROSITE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      834 RPVVLLPECLAPRLIRNLLDLPSSRLDFQVCPAESLSGEEQCTSSAPGAPKAWPATAGL- 892
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             50 QEGEVSGGRCWVTRHAVESLMEKNTHALLDVQLDSVCTLHRMDIFPIVIHVSVNEKMAKK 109

They both participate in a complex with MALT1, where MALT1 binds to B0110 (By similarity).
SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).
TISSUE SPECIFICITY: Detected in adult heart, kidney and liver:
Inwer levels in intestine, placenta, muscle and lung. Also found in fetal lung, liver and kidney.
SIMILARITY: CONTAINS 1 CARD DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  59 CWVTRHAVESLMEKNTHALLDVQLDSVCTLHRMDIFPIVIHVSVNEKMAKKLKKGLQRLG 118

Gaidarov I.O., Suslov O.N., Ovchinnikova T.V., Abdulaev N.G.;
"Guanylate kinase from bovine retina: isolation, primary structure,
and expression in E. coli.",
and expression in E. coli.",
-:- FUNCTION: ESSENTIAL FOR RECYCLING GMP AND INDIRECTLY, CGMP.
-:- CATALYTIC ACTIVITY: ATP + GMP - ADP + GDP.
-:- SUBBUNT: MONOMER (BY SIMILARITY).
-:- SUBBUNT: BELONGS TO THE GUANYLATE KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens (Human).

                                                                 MIGHT BE INVOLVED IN STABILIZING JUNCTIONS.

-!- SUBUNIT: INTERACTS WITH OCCLUDIN, CLAUDINS AND 20-3.

-!- SUBUNIT: INTERACTS WITH OCCLUDIN, CLAUDINS AND 20-3.

-!- SUBCELLULAR LOCATION: PERIPHERAL MANBRANE CYOPLASMIC SIDE.

MOVEMBRY OF 20-1 FROM THE CYTOPLASM TO MEMBRANE IS AN EARLY EVENT OCCURRING CONCURRENTLY WITH CELL-CELL CONTACT.

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

-!- TISSUE SPECIFICITY: THE ALPHA-CONTAINING ISOFORM IS FOUND IN MOST EPITHELIAL CELLS AND THE HIGHLY SPECIALIZED EPITHELIAL JUNCTIONS.

OF RENAL GLOMERULI AND SERTOLI CELLS OF THE SEMINIFEROUS TUBULES.
                                                                                                                                                                                                                                                                              -!- SIMILARITY: CONTAINS 3 PDZ/DHR DOMAINS.
-!- SIMILARITY: CONTAINS 1 SH3 DOMAIN.
-!- SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.
-!- SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LHRMDIFPIVIHVSVNEKM-------AKKLKKGLQRLGTSEEQLLEAARQE 131
